Summary

Cloud and DevOps Engineer who pairs deep expertise in AWS, Azure, Kubernetes, and CI/CD automation with an AI-driven engineering mindset, using AI-assisted development and intelligent tooling to ship reliable software faster. Experienced in designing scalable, cost-optimized cloud architectures, automating infrastructure with Terraform and containers, and building observability into every layer of the stack. Backed by an AI/ML research foundation in deep and federated learning, blending strong systems engineering with a data-informed, automation-first approach. Passionate about driving cloud-native transformation, embedding AI into operations, and continuously optimizing performance, security, and developer velocity.

Education

Rajshahi University of Engineering & Technology

B.Sc. in Electrical & Computer Engineering

January 2018 – September 2023

CGPA: 3.32 / 4.00 (3.7 in the last 4 Semesters)

Work Experience

Brain Station 23

November 2025 – Present

DevOps Engineer II

- **Client Engagement:** Worked directly with clients to understand requirements, diagnose reliability and scaling challenges, and deliver tailored cloud and infrastructure solutions aligned with their operations.
- **Reliability & Scaling:** Partnered on-site with an agri-fintech client to improve the reliability of a Ruby on Rails application on AWS, analyzing system load and high-traffic event spikes to handle large concurrent user loads.
- **Infrastructure Modernization:** Optimized the existing EC2-based system and delivered a full migration and CI/CD plan targeting Amazon EKS for improved scalability, automated deployments, and operational resilience.
- **Cloud Cost Optimization:** Drove cost optimization across multiple projects by analyzing AWS billing and usage patterns, right-sizing compute and networking resources, eliminating idle and redundant infrastructure, and restructuring architectures to reduce recurring monthly cloud spend.
- **Forward Deployed Engineering:** Took ownership of an existing internal application, using AI-assisted development with provided project context to extend, build, and deploy new features into production.
- **Architecture & Documentation:** Produced solution architecture diagrams and technical documentation to support design reviews and client delivery.

Hubar Tech Limited

November 2023 – August 2025

DevOps Engineer

- **Automation:** Set up CI/CD pipelines using GitHub Actions to automate build, test, and deployment processes, ensuring faster and more reliable software delivery.
- **Infrastructure:** Provisioned and managed cloud infrastructure on Microsoft Azure, leveraging Terraform to automate resource deployments across multiple environments, enhancing scalability and consistency.
- **Containerization:** Deployed containerized applications using Docker and orchestrated them with Kubernetes, ensuring high availability and simplified application management.
- **Monitoring & Security:** Contributed to system and network monitoring using tools like Prometheus and Grafana, troubleshooting performance issues, and implementing security best practices to safeguard infrastructure.
- **Collaboration:** Worked closely with development and operations teams to streamline workflows, optimize CI/CD processes, and ensure seamless integration of infrastructure and application changes.

Qubitech Solutions

November 2022 – October 2023

Junior DevOps Engineer & Software Engineer

- **Automation:** Designed and maintained CI/CD pipelines using AWS CodePipeline, CodeBuild, and CodeDeploy to streamline build, test, and deployment workflows.

- **Containerization:** Utilized Amazon EKS and Docker to containerize and orchestrate applications, ensuring consistent environments across development, staging, and production. Leveraged Kubernetes-native features for seamless scalability, rolling updates, and simplified deployment pipelines.
- **Versioning:** Managed source code repositories using Git, implementing branching, merging, and pull request workflows to facilitate efficient collaboration and maintain high code quality standards.
- **Monitoring:** Set up and configured Grafana and Prometheus for real-time monitoring, visualization, and alerting of application performance and infrastructure metrics, enabling proactive issue resolution.
- **Backend Development:** Contributed to backend development using Python and Flask, implementing RESTful APIs and integrating services with cloud infrastructure to support application features and DevOps workflows.

Technical Skills

Cloud Platforms: AWS (EC2, ECS, EKS, S3, RDS, Lambda, VPC, CloudWatch, IAM, ALB/NLB, Route 53), Microsoft Azure (AKS, APIM, Key Vault), Google Cloud Platform (GCP)

Infrastructure as Code: Terraform, AWS CloudFormation, Ansible, Helm

Containerization & Orchestration: Docker, Kubernetes, Amazon EKS, Azure AKS, Helm, container registries (ECR, ACR)

CI/CD & Automation: GitHub Actions, Jenkins, AWS CodePipeline, CodeBuild, CodeDeploy, Maven, GitLab CI

Monitoring & Observability: Datadog, Prometheus, Grafana, EFK Stack (Elasticsearch, Fluentd, Kibana), CloudWatch (metrics, logs, Container Insights), alerting

Databases: MySQL, PostgreSQL, MongoDB, Amazon RDS

Networking & Security: VPC design, subnets, load balancers (ALB/NLB), security groups, IAM policies, secrets management, TLS/SSL, cost optimization

Languages & Scripting: Python, Bash, C++, Ruby (Rails), YAML, SQL

Operating Systems: Linux System Administration (Ubuntu, CentOS, Amazon Linux), Shell scripting

Version Control & Collaboration: Git, GitHub, GitLab, branching & pull request workflows, Agile/Scrum

Certifications

AWS Certified Solutions Architect – Associate, Amazon Web Services Apr 2026
Validates the ability to design resilient, high-performing, secure, and cost-optimized architectures on AWS using core compute, storage, networking, and database services.

AWS Certified CloudOps Engineer – Associate, Amazon Web Services Apr 2026
Demonstrates expertise in deploying, managing, monitoring, and automating operations on AWS, including incident response, high availability, and cost and performance optimization.

AWS Certified Data Engineer – Associate, Amazon Web Services Jun 2026
Confirms skills in designing and operating data pipelines, ingestion, transformation, storage, and governance using AWS data and analytics services.

AI/ML Research

- 3 journal articles + 5 IEEE conference papers in deep learning, federated learning, and computer vision.
- Federated learning frameworks for medical image classification (*Technologies*, 2024; *Computerized Medical Imaging and Graphics*, 2023).
- Privacy-preserving federated learning and ML-based detection systems (IEEE ICCIT & ICPS, 2023).

Analytical Skills

Traits: Communication, Hard Working, Creativity, Decisiveness Critical Thinking, Problem Solving, Confident, Growth Mindset, Adaptability.
